

SAGAR P H

Junior Software Developer

Bengaluru, India | +91 974-366-9950 | sagarph1211@gmail.com | sagar-ph.github.io

PROFESSIONAL SUMMARY

Front-end focused Software Developer with 3+ years of experience building responsive, production-grade web applications using React.js, JavaScript (ES6+), HTML5, and CSS3, backed by Python API integration and SQL-based data handling. Proven track record of developing and maintaining REST APIs, writing and optimizing SQL queries, and collaborating with cross-functional teams (product, QA, backend) to deliver, debug, and performance-tune high-quality features across the full SDLC.

TECHNICAL SKILLS

Front-End: React.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Angular.js, Electron.js, Responsive Web Design

Back-End / APIs: Python (Django, FastAPI), Node.js (Express.js), ASP.NET, REST APIs, GraphQL, WebSockets, C# (WPF)

Databases & SQL: SQL Server (T-SQL queries & joins), MySQL, MongoDB, Redis

Tools & Practices: Git (version control & branching strategies), Docker, Nginx, Debugging & Performance Optimization, Agile/Scrum

Architecture & CS: OOP, SOA, Event-Driven Design, Distributed Systems, Data Structures & Algorithms, RPA (UiPath)

WORK EXPERIENCE

Inventys Technologies Pvt Ltd. - Junior Software Developer | Bangalore, Karnataka, India

04/2023 – Present

Stack: React.js, JavaScript (ES6+), TypeScript, Electron, C# (WPF), Node.js (Express), Python, FastAPI, Redis, Git

- Built and maintained responsive, cross-platform front-end applications with React.js and Electron, including a workflow automation studio with real-time execution tracing, structured logging, and breakpoint-based debugging that cut issue-resolution time by ~25%.
- Integrated React front-end components with Python-based services, developing Python DOM parsing and intelligent UI element detection (lxml, spatial analysis) to support automation across dynamic web interfaces with structural variance.
- Debugged, tested, and optimized application performance across the stack; wrote and maintained unit, integration, and end-to-end tests to uphold automated test coverage and product quality standards.
- Designed and implemented a Redis Pub/Sub-based distributed messaging layer spanning C#, Python, and JavaScript services, applying event-driven and REST-based communication patterns to reduce inter-service latency by ~40%.
- Collaborated with cross-functional teams - product, architects, and QA - in Agile/Scrum ceremonies to translate requirements into scalable technical designs; provided code reviews and guidance to junior developers.

Customer Relationship Management (CRM) Application - Full-Stack Project

2024

Stack: Angular 17, Node.js / Express.js, MongoDB, Redis, Nginx, Docker

- Architected and built a full-stack CRM platform with a component-based front-end (Angular 17) and a Node.js/Express.js REST API back-end supporting core business modules.
- Engineered a JWT-based authentication system with Google OAuth 2.0, rotating access tokens (15-minute TTL), and refresh tokens delivered via httpOnly cookies for secure API access.
- Wrote and optimized MongoDB aggregation queries and a Redis cache-aside layer for analytics endpoints, cutting average API response time by ~60% and reducing manual reporting effort by 3-4 hours/week.

EDUCATION

Don Bosco Institute of Technology, India

2018 – 2022

Bachelor of Engineering — Computer Science and Engineering | CGPA: 7.91

Coursework: Data Structures, Algorithms, OOP, DBMS, SQL, Robotic Process Automation

ADDITIONAL PROJECTS & HIGHLIGHTS

- Secure File Sharing System (Java, JSP, ECC): end-to-end encrypted file transmission using 256-bit ECC key exchange, achieving RSA-equivalent security with reduced overhead.
- Built and deployed personal full-stack projects using the MEAN stack and Django with SQL/NoSQL data layers, REST APIs, and Docker packaging; source hosted on GitHub.
- Solved 400+ problems on LeetCode and HackerRank (DSA, Graphs, DP, Trees, SQL querying) — a strong algorithmic foundation for performance-critical, data-driven feature work.
